

CITIZENSHIP: U.S. Citizen**EDUCATION:** **University of California, Santa Barbara** **2019 - Present***Ph.D. Candidate, Mechanical Engineering**Advisor: Enoch Yeung*

- Mechanical Engineering Excellence Fellowship

- GPA: 4.0

- Coursework:

- ME 203 : Operator Theory
- ME 210 A/B : Numerical Analysis: Matrix Analysis, ODEs, PDEs
- ME 215 A : Applied Dynamical Systems
- ME 225EY : Biological Computing
- ME 225 MM : Mathematical Methods
- ME 236 : Nonlinear Control Systems
- ME 243 A/B : Linear Control Systems
- ME 269 : Network Systems
- ECE 283 : Machine Learning (Supervised, Unsupervised)

- Teaching Assistantship and Tutoring:

- ME 14 : Statics
- ME 155a : Control System Design
- ME 163 : Vibrations
- ECE 179 : Robot Dynamics and Control

University of California, San Diego**2015 - 2019***B.S. Math – Applied Science*

- Chancellor's Associates Scholarship

- Selected Coursework:

- MAE 101 A : Intro to Fluid Mechanics
- MAE 108 : Probability and Statistics for Engineers
- Math 103 A : Intro to Abstract Algebra
- Math 120 A : Complex Analysis
- Math 142 A/B : Real Analysis
- Math 154 : Intro to Graph Theory
- Math 171 A : Linear Optimization

GRADUATE RESEARCH: **Biological Control Laboratory** **Jan 2020 – Present****University of California, Santa Barbara**

- Designed and built genetic toggle switches with time-varying parameters for the purpose of optimizing plastic degradation done by bacteria.
- Mathematically modeled parameter varying genetic toggle switches.
- Provided stability analysis of time varying toggle switch models through the framework of Koopman Operator theory.
- Developed algorithms which fit time varying parameters to the pertinent toggle switch models.
- Built a library of promoters which give distinct gene expression profiles during different bacterial growth phases.

UNDERGRAD RESEARCH: **Delplanque Research Group** **June 2018 – Aug 2018****University of California, Davis** (Funded by UC LEADs)

- Carried out numerical simulations of respiratory drug intake in the human trachea using OpenFOAM.

- Found correlations between parameters of the simulated particle injections and the evenness of the particle distributions.

Coimbra Research Group

June 2017 – Aug 2017

University of California, San Diego (Funded by UC LEADs)

- Conducted research on numerical methods to solve variable order differential equations (VODEs) using MATLAB.
- Devised an efficient numerical method that could solve VODEs 50% faster than conventional methods, so VODE model predictions could be made more quickly, improving the energy efficiency of the system.

Center for Advanced Surgical and Interventional Technology

June 2014 - Aug 2014

University of California, Los Angeles (Volunteer)

June 2016 - Aug 2016

- Assisted in the testing of an innovative way to treat prostate cancer known as focal laser therapy.
- Used Meshmixer to design a model of a human head to test remote trans-oral surgery.
- Developed molds using Solid Works to test the effects of a catheter-fed laser on phantom tissue.
- Compiled lists of potential treatment candidates within the UCLA health database using SQL.
- Tested haptic feedback on the da vinci remote surgical robot.

**EMPLOYMENT
/ EXPERIENCE:**

NASA Jet Propulsion Lab Intern

May 2024 – Aug 2024

Attitude Control Systems Engineer

- Developed a hypothesis-driven orbital space mission to gather atmospheric and geological data pertaining to Saturn's moon, Titan.
- Designed fully redundant attitude control system with contingency plans in the case of partial system failure.
- Aggregated sensing and control components driven by pointing requirements, propellant margins, life cycle considerations, costs, scheduling, and trade-offs.

Supplemental Instructor

Sep 2016 - June 2019

University of California, San Diego

- Facilitated math workshops for college students consisting of tutoring and support to ensure their academic success.
- Worked with professors to develop lesson plans which would supplement material from courses.
- Classes Supported: Linear Algebra, Calculus (1,2,3), Pre-Calculus

PROJECT:

Data driven assessment of wildfire risk (SIAM Grad Student Math Modeling Camp)

- Used clustering, statistical analysis, dynamic mode decomposition, ODE and PDE modeling to predict and interpret wildfire risk across the United States. ([PDF](#))

| TECHNICAL SKILLSETS: | Programming: | |
| | -Syntax: | |
| | · Python | |
| | · MATLAB | |
| | | |

- Java
- SQL
- HTML & CSS
- Julia
- Environments:
 - Linux, Window, macOS

Data Science and Machine Learning:

- PyTorch
- TensorFlow
- Sci-Kit Learn
- SciPy Optimize
- Principal Component Analysis
- Neural networks for classification and prediction
- Logistic Regression
- k means Clustering
- c means Probabilistic Soft Clustering

Biological Lab Skills:

- Bacterial Cell Cultures
- Mammalian Cell Cultures
- DNA Design
- Golden Gate Assembly
- Genetic Editing
- DNA Sequence Analysis
- Genetic Circuit Design
- Gen5 Plate Reader Experiments

Design and Simulation:

- Geneious Prime
- Solid Works
- Meshmixer
- OpenFOAM
- 3D printing
- Simulink

Mathematics:

- Modelling and control of biological and physical processes
- Verification and falsification of claims through logic and reasoning
- Probabilistic and statistical methods
- Numerical analysis
- Model parameter fitting

Circuits and Electronics:

- µC: Arduino

Graphic Design:

- Adobe Photoshop
- Adobe Illustrator
